

Governance Plan — Grade Finalization Process Package

Version: 1.0 **Published:** 2026-03-24 **DRI:** Jason Geanuracos, Process Documentation Lead **Next Review Date:** 2027-02-16 (or upon PowerSchool UI change, grading policy update, or documented error in SOP) **Applies to:** All artifacts in the Grade Finalization Process Package (M06KB-process-package)

1. Purpose

This governance plan establishes the minimum viable governance structure for the Grade Finalization Process Package. It defines who is responsible for keeping the process documentation accurate, how often it is reviewed, how changes are approved and recorded, and what escalation paths exist when issues arise.

2. Directly Responsible Individual (DRI)

Field	Value
Name	Jason Geanuracos
Role	Process Documentation Lead
Responsibilities	Maintain SOP accuracy; schedule and conduct reviews on cadence and upon trigger events; approve or reject proposed changes; maintain the change log; escalate issues per Section 6

The DRI is the single accountable owner for this process package. All questions about the documentation, proposed changes, and review scheduling are directed to the DRI.

3. RACI

Activity	DRI	IT Operations	Building Admin	Dept Head
Maintain and update SOP	R/A	C	C	—
Review on scheduled cadence	R/A	—	C	—
Approve minor changes (formatting, clarification)	A	—	—	—
Approve major changes (scope, roles, policy)	R	C	C	A
Escalate compliance or data issues	R	A	—	C
Publish updated artifacts	R/A	—	—	—

Key: R = Responsible, A = Accountable, C = Consulted, — = Not involved

4. Review Cadence

Routine Reviews

The process package is reviewed on a **semi-annual schedule** — once every six months — aligned to the academic calendar:

Review Window	Target Date
Mid-year review	January 2027
End-of-year review	July 2027
Next formal review deadline	2027-02-16

Trigger-Based Reviews

An immediate out-of-cycle review is required if any of the following occurs:

- PowerSchool UI changes that affect documented steps or screenshots
- A grading policy update that changes roles, timing, or procedures
- A new compliance or data privacy requirement affecting stored artifacts
- A documented error in the SOP reported by a staff member or administrator
- A failed QA checklist review

Trigger-based reviews are initiated by the DRI within **five business days** of the triggering event.

5. Change Control

All changes to artifacts in this process package follow this workflow:

1. **Request** — A change is identified by the DRI, IT Operations, or building administration
2. **DRI review** — DRI evaluates the change against current SOP, diagrams, and related artifacts
3. **Consultation** — If the change affects system configuration (IT Operations) or grading policy (Building Admin), those parties are notified and given opportunity to review
4. **Approval** — Minor changes (formatting, typo correction, clarification) are approved by the DRI alone. Major changes (scope, roles, policy impact) require Dept Head sign-off
5. **Documentation** — An entry is added to `CHANGELOG.md` and the governance change log table (`governance/change-log-table.md`) with: version, date, author, summary, and reason
6. **Version bump** — The artifact version is incremented following semantic versioning conventions (patch for minor fixes, minor for content changes, major for scope changes)
7. **Publication** — Updated artifacts are committed to the repository; exported PDFs are regenerated for any modified source files

6. Escalation

Situation	Step 1	Step 2	Step 3
Error in SOP or documentation	DRI corrects and documents in change log	—	—
Disputed change (content or scope)	DRI documents dispute and rationale	Escalate to Dept Head for decision	—

Compliance or data privacy risk	DRI documents risk and initiates review	Escalate to IT Operations	Escalate to compliance lead if unresolved
System change breaks documented procedure	DRI initiates trigger review within 5 days	Consult IT Operations on updated behavior	Publish revised SOP before next finalization window

7. Sunset and Refresh

This process package has a **12-month active review commitment** from its publication date.

Milestone	Date
Package published	2026-02-16
Governance layer added	2026-03-24
Next scheduled review	2027-02-16
Sunset evaluation	2027-02-16 — DRI determines whether to renew, archive, or deprecate

If PowerSchool is replaced or the grade finalization process is fundamentally restructured before the sunset date, the DRI initiates a trigger review and updates this plan accordingly. At the sunset evaluation, the DRI documents the decision (renew, archive, or deprecate) in the change log.

This governance plan applies to all artifacts in the Grade Finalization Process Package as listed in README.md. For the full artifact change history, see CHANGELOG.md and governance/change-log-table.md.
