

Redaction & Data Handling Plan — Grade Finalization Process Package

Version: 1.0 **Published:** 2026-03-24 **DRI:** Jason Geanuracos, Process Documentation Lead **Next Review Date:** 2027-02-16 **Applies to:** All artifacts in the Grade Finalization Process Package (M06KB-process-package)

1. Purpose

This plan defines how sensitive data is identified, classified, redacted, stored, and accessed within the Grade Finalization Process Package. It ensures that no personally identifiable information (PII), credentials, or live system data are exposed in published or submitted artifacts.

2. Data Classification Tiers

Tier	Definition	Examples in this package
Public	Safe for external distribution without restriction	SOP procedure text, diagrams (no data), QA checklist
Internal	Appropriate for staff use; not for external distribution	KB_Page.md, Quick_Reference.md, Checklist.md, measurement plan
Confidential	Contains sensitive data; must be redacted before any external sharing	Screenshots showing PowerSchool UI with real names, emails, or profile photos
Restricted	Must remain local; do not commit to public repo or share with third-party AI tools	Raw unredacted screenshots containing live system data or real identifiers

3. Redaction Rules

When sensitive data is found in an artifact, apply the following substitution rules before publishing or submitting:

Data Type	Redaction Token
Real teacher or staff full name	[STAFF_NAME]
Real email address	[EMAIL_REDACTED]
Real recipient name (first name only)	[RECIPIENT_NAME]
Profile photo or avatar	Blur or replace with [PHOTO_REDACTED]
Student name or ID	[STUDENT_ID]
System credentials or passwords	[CREDENTIAL_REDACTED]
Real system login URL	[SYSTEM_URL]
Real external vendor URL with org-specific parameters	[VENDOR_URL]

PowerSchool login screen data	Blur or label [SCREENSHOT_REDACTED: login screen]
-------------------------------	---

Redaction tokens must be visible and legible in the published artifact — do not use white text on white background or otherwise obscure that a redaction occurred.

4. Storage & Access

Item	Location	Access
Source of truth (all artifacts)	Git repo: https://github.com/JasonEG/M06KB-process-package.git	Repo owner only (private)
Local working copy	\\COLUM-FILE\Faculty\jgeanuracos\Desktop\UCTeach\IT7039 SS\M06 KB\process-package\	DRI only
Exported PDFs for submission (A10/)	Same repo, A10/ folder	Redacted versions only — safe to submit
Raw screenshots (pre-redaction, if any)	Local working copy only	Do not commit to repo if they contain live PII
Teacher ID-to-name mapping (if used)	Held by Process Owner only; not in this dataset	Not stored in repo

5. Audit Logging

Formal system-level access logging is not available for this process package (no DMS or access management system is in use). In place of automated logging, the following manual audit record is maintained:

Log Type	What Is Recorded	Where	Frequency
Artifact review log	Which artifacts were reviewed, by whom, on what date, and what was found	Section 6 of this document (review table)	Each governance review cycle and upon trigger events
Change log	Every version change — version number, date, author, summary, reason	CHANGELOG.md and governance/change-log-table.md	Each time an artifact is modified
Redaction status	Whether each artifact was inspected for sensitive data and what action was taken	Section 6 of this document (review table)	Each governance review cycle

The DRI is responsible for keeping these records current. If this process package is adopted in a system with access logging capability (e.g., SharePoint, Confluence, a DMS), system-level access logs should be enabled and reviewed as part of each scheduled review.

6. AI Tool Handling

- Do not paste unredacted screenshots or real names into AI tools (including Claude Code)
- Share only redacted Markdown text for AI-assisted review

- The mock CSV dataset (T001–T018) is safe to share with AI tools — it contains no real names
- System URLs in Markdown source files are real but not sensitive credentials; sharing for documentation review is acceptable

7. Redaction Evidence — Artifact Review Table

The following table records the outcome of the Step 1 artifact audit (2026-03-24). Each artifact was reviewed for sensitive data. Status reflects action taken or confirmed.

Markdown Source Files

Artifact	Reviewed	Sensitive Data Found	Action Taken	Status
docs/source/SOP_v1.md	✓ 2026-03-24	None	None required	Clear
docs/source/SOP_v1_annotated.md	✓ 2026-03-24	Author name (intentional attribution)	None — intentional	Clear
docs/source/KB_Page.md	✓ 2026-03-24	Real system URL, IT Help Desk URL, real email, full name	Classified Internal; acceptable for staff-facing use; no redaction required for internal distribution	Internal — no redaction needed
docs/source/Quick_Reference.md	✓ 2026-03-24	Real system URL, IT Help Desk URL, real email	Same as KB_Page.md	Internal — no redaction needed
docs/source/Checklist.md	✓ 2026-03-24	Real system URL	Same as above	Internal — no redaction needed
artifacts/examples/walkthrough-outline.md	✓ 2026-03-24	None	None required	Clear
measurement/measurement-plan.md	✓ 2026-03-24	None — T-codes only, explicitly documented as mock	None required	Clear
measurement/data/Q1-finalization-export.csv	✓ 2026-03-24	None — T001–T018 anonymous IDs only; no real names	None required	Clear
diagrams/bpmn/process.bpmn	✓ 2026-03-24	None	None required	Clear

diagrams/mermaid/process.mmd	✓ 2026-03-24	None	None required	Clear
------------------------------	--------------	------	---------------	-------

Screenshots

File	Reviewed	Sensitive Data Found	Action Required Before A10	Status
Email Sent screen.png	✓ 2026-03-24	Real full name, real email address, recipient first name, profile photo	Redact before A10 export — blur or replace name, email, recipient name, and profile photo	⚠ Pending redaction
Gradebook screen.png	✓ 2026-03-24	Class name visible; student name column present but not confirmed readable at audit resolution	Requires human visual confirmation — if student names are readable, redact before A10	⚠ Pending confirmation
Tradional Grade Calc menu screen.png	✓ 2026-03-24	Class name only ("8(A) Intro to Steam") — not PII	None required	Clear
Qtr weights screen.png	✓ 2026-03-24	Class/term info only — not PII	None required	Clear
Weights screen.png	✓ 2026-03-24	Class/term info only — not PII	None required	Clear
Semester Weights screen.png	✓ 2026-03-24	Class/term info only — not PII	None required	Clear
Qtr final grade status screen.png	✓ 2026-03-24	None — modal dialog only	None required	Clear
S1 Final Grade status screen.png	✓ 2026-03-24	None — modal dialog only	None required	Clear

8. Open Redaction Items

Two items require action before the A10 submission package is finalized:

#	Item	Action	Owner
1	Email Sent screen.png	Redact real name, email, recipient name, and profile photo before including in A10	DRI

2	Gradebook screen.png	Visually confirm no readable student names; redact if present before including in A10	DRI
---	-------------------------	---	-----

These items are tracked here and in `governance/audit-notes.md` . Step 7 (A10 package assembly) must not proceed until both items are resolved.

This plan was authored based on the Step 1 artifact audit completed 2026-03-24. For full audit findings see `governance/audit-notes.md` .
